Falling From The Sky Gravity

Weightlessness is the complete or near-complete absence of the sensation of weight. This is also termed zero-g, although the more correct term is "zero g-force". It occurs in the absence of any contact forces upon objects including the human body.. Weight is a measurement of the force on an object at rest in a relatively strong gravitational field (such as on the surface of the Earth).

Weightlessness - Wikipedia

For all objects at height – including humans – the focus always should be on preventing things from falling rather than on catching objects, or on limiting the damage after they fall. Dropped objects have been a problem for as long as the force of gravity has existed, and have been written about ...

The Sky Isn't Falling (And Your Tools Shouldn't Either)

Gravity SEN Gravity is a force, which we don't think a lot about. It is gravity that holds things to the Earth's surface and prevents things from floating off into space.

Here, F describes the force acting, m is the mass of the object, and a is its acceleration, the change in its motion. Like motion, force has both a value or "strength", and a direction in which it acts. We commonly think of "acceleration" as a speeding up, but in physics it can also include a slowing down ("deceleration") as well as a change in direction.

Gravity is such a pesky thing. It prevents us from doing all sorts of wonderful things. Such as floating through the air like a balloon, traveling into orbit without paying an ugly cost in delta V, and being morbidly obese but still light on your feet like Baron Vladimir Harkonnen. By the same token, it would also be incredibly useful to be able to create gravity on command.
