Earlier in Lesson 6, four kinematic equations were introduced and discussed. A useful problem-solving strategy was presented for use with these equations and two examples were given that illustrated the use of the strategy. Then, the application of the kinematic equations and the problem-solving strategy to free-fall motion was discussed and illustrated.

The use of metric prefixes dates back to the inception of the French metric system, in 1793. It was originally decided that the submultiples of all basic units would be prefixed with a Latin root, corresponding to the decimal divisor (deci for 10, centi for 100, milli for 1000), whereas the decimal multiples would be prefixed with a Greek root, corresponding to the decimal multiplier (deca for ...

Easy Difference, Final: means that the Value of the variable is Final and it will not change anywhere. If you say that final $x = 5$ it means x can not be changed its value is final for everyone. Static: means that it has only one object. Let's suppose you have $x = 5$, in memory there is $x = 5$ and it's present inside a class. If you create an object or instance of the class which means there a ...
