Introduction to the link between exponents and logarithms. The exponent of a number says how many times to use the number in a multiplication.. Example 1: $10^4 = 10 \times 10 \times 10 \times 10 = 10\,000$.

The logarithm tells us what exponent we need to raise a number to in order to obtain another number.. Example 2: $\log_{10}(10\,000) = 4$. We may interpret this as "using 10 as a base, what is the logarithm of ...

Computer - History of computing: A computer might be described with deceptive simplicity as "an apparatus that performs routine calculations automatically." Such a definition would owe its deceptiveness to a naive and narrow view of calculation as a strictly mathematical process. In fact, calculation underlies many activities that are not normally thought of as mathematical.
