Variables are an important part of science projects and experiments. What is a variable? Basically, a variable is any factor that can be controlled, changed, or measured in an experiment. Scientific experiments have several types of variables. The independent and dependent variables are the ones usually plotted on a chart or graph, but there are other types of variables you may encounter.

Multilateration is a navigation and surveillance technique based on the measurement of the times of arrival (TOAs) of energy waves (radio, acoustic, seismic, etc.) having a known propagation speed. The time origin for the TOAs is arbitrary. (By the reciprocity principle, any conceptual method that can be used for navigation can also be used for surveillance, and vice versa.)
