Game theory is the study of mathematical models of strategic interaction between rational decision-makers. It has applications in all fields of social science, as well as in logic and computer science. Originally, it addressed zero-sum games, in which one person's gains result in losses for the other participants. Today, game theory applies to a wide range of behavioral relations, and is now an ...

Game theory - Wikipedia

theoretical work in game theory which was very influential in economics. At the same time, the US Federal Communications Commission was using game theory to help it design a \$7-billion auction of the radio spectrum for personal communication services (naturally, the bidders used game theory too!). The
