Foundations of Analysis. The object of study here is Euclidean  $n$ -dimensional space; the author does allude to metric spaces and occasionally indicates, both in the text and in the exercises, where things generalize and where they don't, but the bulk of the discussion is very much Euclidean-based.

Foundations of Analysis is an excellent new text for undergraduate students in real analysis. More than other texts in the subject, it is clear, concise and to the point, without extra bells and whistles. It also has many good exercises that help illustrate the material. My students were very satisfied with it.
