Study photosynthesis in a variety of conditions. Oxygen production is used to measure the rate of photosynthesis. Light intensity, carbon dioxide levels, temperature, and wavelength of light can all be varied. Determine which conditions are ideal for photosynthesis, and understand how limiting factors affect oxygen production.

Sunlight is the energy source for photosynthesis. Photons of light are captured and the energy is transferred to molecules in the plant cells. That energy is then used to convert the inorganic compounds that contain little energy into organic compounds that contain a lot of energy that the plant can use. Return to Lab Review Page
