As the graph below shows, exponential growth. at first, has a lower rate of growth than the linear equation $f(x) = 50x$; at first, has a slower rate of growth than a cubic function like $f(x) = x^3$, but eventually the growth rate of an exponential function $f(x) = 2^x$, increases more and more -- until the exponential growth function has the greatest value and rate of growth!

Ninth grade Lesson Zombies: Exploring Exponential Growth

Answer: D. Exponential decay of 93%. Step-by-step explanation: We are given an exponential function .. We know, the standard exponential function , where a is the initial value and b is growth factor.. If b is greater than 1, then it would be an Exponential growth and if b is less than 1, then it would be an Exponential decay.
