Functional Analysis By

Functional analysis is a branch of mathematical analysis, the core of which is formed by the study of vector spaces endowed with some kind of limit-related structure (e.g. inner product, norm, topology, etc.) and the linear functions defined on these spaces and respecting these structures in a suitable sense. The historical roots of functional analysis lie in the study of spaces of functions ...

The diagram shown here is itself a brilliant synthesis, a social and functional analysis of a world city which manages to pay attention to detail (the location of each borough town hall), as well as providing snapshot information on waterways and reservoirs, industrial wharves, railways, shopping centres, open spaces, and (shades of things to come) 'central communities with a high proportion ...

Functional Analysis: Word of Warning. This is a very basic outline of a functional analysis and is completely hypothetical – please do not emulate it. It is provided to give a general outline of how an analysis might be carried out but you should never attempt to do anything like this without a professional supervising the entire assessment.

Functional analysis in behavioral psychology is the application of the laws of operant and respondent conditioning to establish the relationships between stimuli and responses. To establish the function of operant behavior, one typically examines the "four-term contingency": first by identifying the motivating operations (EO or AO), then identifying the antecedent or trigger of the
