Chapter 1. The Real Numbers. This course has two goals: (1) to develop the foundations that underlie calculus and all of post calculus mathematics, and (2) to develop students' ability to understand definitions and proofs and to create proofs of their own – that is, to develop students' mathematical sophistication.

This Research Foundation brief explores various dimensions of the high-yield bond market. One contributor decomposes returns and relates risk and associated risk premiums via an econometric fair value model. Another illustrates principles of credit analysis via a case study involving a debt-financed merger.

This introduction to basic analysis presents a careful development of the real number system and the theory of calculus on the real line, extending the theory to real and complex planes. Designed as a first encounter with rigorous, formal mathematics for students with one year of calculus, the work features extended discussions of key ideas and detailed proofs of difficult theorems.

**Foundations of Analysis - David French Belding, Kevin J ...**

Foundations of mathematics is the study of the philosophical and logical and/or algorithmic basis of mathematics, or, in a broader sense, the mathematical investigation of what underlies the philosophical theories concerning the nature of mathematics. In this latter sense, the distinction between foundations of mathematics and philosophy of mathematics turns out to be quite vague.
