*Functional Groups Chemistry Answers - Thank you completely much for downloading functional groups chemistry answers. Maybe you have knowledge that, people have look numerous time for their favorite books similar to this functional groups chemistry answers, but end up in harmful downloads.*

*Rather than enjoying a fine ebook like a cup of coffee in the afternoon, otherwise they juggled taking into consideration some harmful virus inside their computer. functional groups chemistry answers is nearby in our digital library an online entry to it is set as public appropriately you can download it instantly. Our digital library saves in multiple countries, allowing you to acquire the most less latency epoch to download any of our books taking into account this one. Merely said, the functional groups chemistry answers is universally compatible as soon as any devices to read.*

**Functional Groups Chemistry Answers**

Knowing the functional groups is a must in organic chemistry and in this post, we will go over their structure and interesting applications. Let's start from the simplest class of organic compounds - the hydrocarbons .

Types of Functional Groups. NH<sub>2</sub> Functional Group: This group is also called as amine or amino group. This group is obtained by replacing one atom of hydrogen from ammonia molecule with an aryl group or an alkyl. There are two kinds of NH<sub>2</sub> Functional Group namely Aliphatic R-NH<sub>2</sub> and Aromatic Ar-NH<sub>2</sub>.

**Functional Groups - Definition, Nomenclature, and Properties**

Functional groups are collections of atoms in organic chemistry molecules that contribute to the chemical characteristics of the molecule and participate in predictable reactions. These groups of atoms contain oxygen or nitrogen or sometimes sulfur attached to a hydrocarbon skeleton.

I can't understand how I'm supposed to predict characteristics about molecules based on functional groups or vice versa (what functional groups exist from the characteristics)... which functional groups are responsible for acidity, polarity, hydrophilic or hydrophobic properties... The ones I should know of are (hydroxyl, carboxyl, phosphate, amino, sulfhydryl, amino, methyl, carbonyl) Please ...

**Functional Groups!!! Please help!?!? | Yahoo Answers**

In organic chemistry, functional groups are lexicon-specific groups of atoms or bonds within molecules that are responsible for the characteristic chemical reactions of those molecules.

**Functional groups in chemistry - answers.com**

Functional groups are specific substituents within molecules that are responsible for the characteristic chemical reactions of those molecules. The same functional groups undergo the same reaction regardless of the size of their molecules. We covered the in chemistry class this week. Test out how much you know about them through the quiz below.

**Unit 11 - Organic Chemistry**

Functional groups are the groups of atoms that are attached to the carbon backbone of organic molecules. Functional groups are responsible for the characteristic chemical reactions of organic compounds. They are less stable than the carbon backbone and are more likely to take part in chemical reactions. They determine the characteristics and chemical reactivity of organic molecules.
