From the Moon, Earth is an ideal reference point to calibrate the cameras. The Narrow Angle Cameras—the cameras designed to capture the most detailed images of the Moon—took this image during calibration. The image is a mosaic of the views recorded by the Narrow Angle Camera Left and Narrow Angle Camera Right.

Earth from the Moon - earthobservatory.nasa.gov

From the Earth to the Moon was written almost 100 years before man finally stepped foot on the moon, a mixture of early sci-fi and adventure book that has truly imaginative elements alongside Jules Verne's very scientific mind. In an America that is rather frightfully similar to its current state, gun enthusiasts find themselves at the end of the civil war without anything to shoot.

From the Earth to the Moon by Jules Verne - Goodreads

The Moon was likely formed after a Mars-sized body collided with Earth. Our moon is the fifth largest of the 190+ moons orbiting planets in our solar system. Earth's only natural satellite is simply called "the Moon" because people didn't know other moons existed until Galileo Galilei discovered four moons orbiting Jupiter in 1610. Go Farther.
