Sometimes it is impossible to factor a polynomial by finding the greatest common factor. For instance, the polynomial $(3xy - 24x^2 - 7y + 56x)$ has no greatest common factor. In this case we can try searching the polynomial for factors that are common to some of the terms. Then we can attempt a method known as grouping. Take the polynomial and separate it into two groups.

Factoring by Grouping Factoring by grouping is commonly used when there are more than three terms in the polynomial. It is possible to group more than once in any given problem. Also, be aware that the terms do not necessarily need to be grouped evenly. This means a polynomial with 4 terms could be grouped with the first 3 terms, then the last.
