This sim can be used in conjunction with a lab activity, or in place of one (in a pinch). Its intent is to develop the basic relationship governing the geometry of a two-slit interference pattern, and then to work with that relationship. The activity uses the PhET sim, Wave Interference. The Fringe of Optics (PhET page).

Fringe (optics) One of the light or dark bands produced by interference or diffraction of light. Distances between fringes are usually very small, because of the short wavelength of light. Fringes are clearer and numerous when produced with light of a single color. Diffraction fringes are formed when light from a point source,...
