Once the students have their aprons and goggles on in the lab, I give each group a cow eye. I ask the students to look at the back of their eye dissection worksheet while I finish handing out the eyes. From there, I direct students to Eye Dissection (Page 1) and begin to work through the page with the students. I read the steps with the students and we complete the dissection together as a class.

Cow Eye Fill in the parts! Parts: Aqueous humor - A clear liquid that helps give the cornea its shape. Choroid coat - Tissue below the retina that supplies nutrients. Cornea - Clear, protective coating in front of the eye. Ciliary body - Tissue surrounding the lens. Can change the shape of the lens for focusing. Iris - Muscle in front of the lens. Can change how much light enters the eye.

### **Cow Eye Dissection - for students**

The dissection is very simple and can easily be conducted with younger students, though I would suggest using scissors instead of a scalpel with younger students. The worksheet also contains questions and a labeling exercise. Students will need other resources, like a textbook or google to label the drawing.

SHEEP EYE DISSECTION PROCEDURES The anatomy of the human eye can be better shown and understood by the actual dissection of an eye. One eye of choice for dissection, that closely resembles the human eye, is that of the sheep. Differences between the two eye types will be mentioned as the dissection is completed.
