The gamma function along part of the real axis. In mathematics, the gamma function (represented by  $\Gamma$ , the capital Greek alphabet letter gamma) is one of the extensions of the factorial function with its argument shifted down by 1, to real and complex numbers. Derived by Daniel Bernoulli, if  $n$  is a positive integer,  $\Gamma(n) = (n-1)!$  Although other extensions do exist, this particular definition is the ...

**Derivatives-delta, gamma, theta of options, delta neutrality**

In mathematics, the upper and lower incomplete gamma functions are types of special functions which arise as solutions to various mathematical problems such as certain integrals.. Their respective names stem from their integral definitions, which are defined similarly to the gamma function but with different or "incomplete" integral limits. The gamma function is defined as an integral from ...
