Solving Equations with Infinite Solutions or No Solutions Solving Equations. When you're solving equations in algebra, it is kind of like a treasure hunt. Infinite Solutions. The first is when we have what is called infinite solutions. No Solutions. The next case is what is called no solutions. In ...

### Solving Equations with Infinite Solutions or No Solutions ...

Solution: Step 1: Something infinite has no limits or boundaries. Step 2: Here, the set of natural numbers contains infinite number of elements. Step 3: Hence,  $P = \{\text{Set of natural numbers}\}$  is an infinite set.

We're asked to use the drop-down to form a linear equation with infinitely many solutions. So an equation with infinitely many solutions essentially has the same thing on both sides, no matter what  $x$  you pick.

### Creating an equation with infinitely many solutions (video ...

then there are "infinite solutions", meaning, when graphed, the two equations would form the same line If the variables disappear, and you get a statement that is never true, such as  $0 = 5$  or  $4 = 7$  then there is "no solution" , meaning, when graphed, the two equations would form parallel lines, which never intersect.

Solutions. The solution of an equation is the value(s) of the variable(s) that make the equation a true statement. An equation like  $2x + 3 = 7$  is a simple type called a linear equation in one variable. These will always have one solution, no solutions, or an infinite number of solutions.

Infinite solutions Sample. The feasible region is bounded and nonempty. As shown in the graph, the objective function is parallel to the lines that limit the feasible region and grows in the direction of growth of  $x$  and  $y$  coordinates the maximum is reached in any one of the points of the feasible set located at the line farthest from the origin...

$0 + 0 = 0$  which becomes  $0 = 0$ . this indicates an infinite number of solutions. any value for  $x$  and any value for  $y$  that satisfies one of the equations will automatically satisfy the other equation. for example: if  $x = 5$  and  $y = -3$ , then  $x + y = 2$  becomes  $5 - 3 = 2$  which becomes  $2 = 2$  which is good.

How to Write the Infinite Solution. The infinite solution for the above system can be written in terms of one variable. One way of writing it is  $(x,y,z)=(x,5,5-x)$ . Since  $x$  can take on an infinite number of values, the solution can take on an infinite number of values. Paul Dohrman's academic background is in physics and economics.

The three types of solution sets: A system of linear equations can have no solution, a unique solution or infinitely many solutions. A system has no solution if the equations are inconsistent, they are contradictory. for example  $2x+3y=10$ ,  $2x+3y=12$  has no solution. is the rref form of the matrix for this system.
