The evolution of the peppered moth is an evolutionary instance of directional colour change in the moth population as a consequence of air pollution during the Industrial Revolution. The frequency of dark-coloured moths increased at that time, an example of industrial melanism. Later, when pollution was reduced, the light-coloured form again predominated.

Peppered moth evolution - Wikipedia

A must-read for anyone who wants to participate in talk.origins. This article lays out the land for evolutionists and creationists alike, presenting the concepts of and the evidence for biological evolution.

Introduction to Evolutionary Biology - TalkOrigins Archive

The evolution of sexual reproduction describes how sexually reproducing animals, plants, fungi and protists could have evolved from a common ancestor that was a single celled eukaryotic species. There are a few species which have secondarily lost the ability to reproduce sexually, such as Bdelloidea, and some plants and animals that routinely reproduce asexually (by apomixis and ...

Early Modern Homo sapiens. All people today are classified as Homo sapiens. Our species of humans first began to evolve nearly 200,000 years ago in association with technologies not unlike those of the early Neandertals. It is now clear that early Homo sapiens, or modern humans, did not come after the Neandertals but were their contemporaries.

Evolution of Modern Humans: Early Modern Homo sapiens

Differences between Norway rats and house mice. Norway rats and house mice belong to different species. A species is a group of related individuals or populations which are potentially capable of interbreeding and producing fertile offspring. So Norway rats and house mice belong to different species and cannot interbreed. Humans and orangutangs, chipmunks and red squirrels, bottlenosed dolphins ...
