The state-space descrip- tion consists of the state differential equation $x(t)\dot{} = Ax(t)+Bu(t)$ and the algebraic output equation $y(t)= Cx(t)+Du(t)$ from Equation (1.1). Figure 1.1 shows the block diagram for the state-space representation of general multiple-input, multiple-output linear time-invariant

systems.

State-Space and Linearization In this chapter we introduce ideas that can be used to implement controllers on physical hardware. The resulting block diagrams and equations also serve as the basis for simulation of dynamic systems in computers, a topic that we use to motivate the introduction of state-space models. The state-space formalism
